THIS HERNIA AWARENESS MONTH, BG MEDICAL/SURGIMESH® PARTNERS WITH CQINSIGHTS TO LAUNCH THE FIRST HERNIA PATIENT-CENTERED OUTCOMES INITIATIVE

This partnership aims to revolutionize the healthcare industry by partnering with providers and institutions to apply systems and data science insights to measure true value, lower costs, and improve outcomes for patients suffering from hernias.

DATE – Chicago, IL – BG Medical., the manufacturer and distributor of the 21st Century *SURGIMESH*® Platform, announced today it is honoring Hernia Awareness Month by partnering with CQInsights to pioneer a new approach that delivers better outcomes for patients, with a larger mission to share sustainable solutions that improve healthcare for everyone.

As much as 10% of the population develops some type of hernia during life.¹ More than 1 million abdominal hernia repairs are performed each year, with inguinal hernia repairs constituting nearly 800,000 of these cases.² According to a 2012 Wall Street Journal article, more than 30% of patients may, unfortunately, suffer from long-term chronic pain and restricted movement after surgery to fix a hernia.³

“We are extremely excited to be the first hernia-focused organization to make this commitment to excellence. This collaboration demonstrates the mission the BG Medical/*SURGIMESH* team pursues daily. By partnering with CQInsights, and several other highly skilled hernia surgeons, we are working towards achieving our mission to provide superior patient outcomes and reduce the instance of chronic pain, all while reducing the cost of healthcare,” said BG Medical President and CEO John Huelskamp.

Dr. Bruce Ramshaw, Past President of the Americas Hernia Society and Co-Founder of CQInsights, noted, “I am thrilled that an organization of this size is willing to invest in the future of hernia surgery. We approached the *SURGIMESH* team to partner in this monumental effort because even though they are a smaller organization, it is evident that they are as dedicated to focusing on the patient and improving the value of healthcare as we are at CQInsights.”

The June 2021 partnership and awareness campaign falls in line with the mission of CQInsights to apply their CQI Method working with patient care teams, care institutions, industry companies, and registries by measuring and improving true value to lower cost and improve outcomes, an effort that began in 2010.

About BG Medical and *SURGIMESH*

SURGIMESH is the only non-woven polypropylene matrix mesh that promotes rapid and complete vascularized incorporation in just 12 days. Because of its low profile and ability to be trimmed, *SURGIMESH* is also easier to deploy for all types of open and laparoscopic procedures, including robotics. *SURGIMESH* is a proprietary 21st century alternative to the use of older knitted or woven meshes and has the potential to significantly reduce chronic pain and recurrence. BG Medical’s headquarters is in Chicago, IL. For more information, visit <http://www.surgimesh.com>.

BG Medical encourages patients to seek medical attention for typical and atypical symptoms associated with hernias to help achieve and maintain good health with as high a quality of life as possible. You should talk to
